Welcome!
Welcome to use ICM Project. For questions: support@icmfinland.fi

ICM Project 4.0 - January 2007
© ICM Finland Ltd 2003-2007

ASP -service Instantly available through web browser, no hardware investments needed

Versatility Suitable for various different organizations and a wide range of projects

Easy to use Everyone can quickly master the application

One centralized database High data security and an application that is always available*

Access Right management Easy and secure way to share information inside the company as well as with clients, suppliers and other interest groups

Real-time communication Desktop sharing, video conferences, internet calls (VoIP)

All in one package Project, Document and Issue Management as well as Communication in one cost efficient and centralized package

* Requires Internet connection

Efficient information management, advanced project management and cost efficiency

All these have one thing in common – ICM Project

Project and activity management now

Projects are often managed with separate tools that do not communicate with each other. In many organizations data is stored in individual PC's and emails, but it is not available for everyone. Thus finding specific information can be cumbersome. It's unclear who has actually contributed what, when, and where is the latest version.

Wouldn't it be easier if all the information needed was just three clicks away?

The solution – ICM Project

ICM Project is a versatile project management tool that has a special focus on the information management. The database saves all the information (like documents, tasks, changes etc.) added to the system with an audit trail. ICM Project meets the ISO quality management standards for actions traceability. The data security level is approved by the bank industry.

You can access all your projects through ICM Project Portal. Databases and users are created and managed also through this Portal. With unlimited number of project databases that you can create in the Portal, the Portal serves also as a project archive for old closed projects. This provides excellent precondition to exploit previous information for organizational learning. This way information becomes the property of the organization and enables real synergy benefits.

Note also that our easy ASP -service includes software licenses, server updates, service, back-up copies and aging protection for equipment!

Future visions

Increasing amount of activities will become project driven due to increasing efficiency demands. Information management will become more important in the ever tightening competition. Decentralized projects and network economy require investments in the project management processes and practises. Project management needs to support organizations' main processes and integrate quality and operational applications. ICM Project is specifically created for this environment.

Benefits to project members

Management team

- Project progress follow-up
- Responsibilities
- Quick notifications enabling quick reactions
- Measuring the targets
- Identifying deviations

Project management

- Project planning and scheduling
- Project progress follow-up
- Quality and risk assessment
- Success assessment
- Quick reactions to deviations and changes

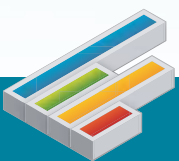

Organization's project members

- Possibility to access databases anywhere anytime
- Document management
- Quick problem solving
- Discussion opportunities
- Own task follow-up and reporting

Interest groups

- Access to granted information only
- Quick notifications enabling quick reactions
- Project progress follow-up
- No need for separate information sharing

OVERALL BENEFITS

1. Cost and time savings
2. Information flow realtime and strenghtened
3. Clear schedule
4. Common operational models
5. Operational development with cumulative information
6. No large investments or software installation, the newest product version in use

ICM PROJECT CONSISTS OF

- Powerful Search functions
- Information traceability
- Read & Modify access rights management
- Web user interface
- Data security and back-ups
